

Computer Science 2 Project

Progress report: Week 2

By: Allefra Enrique and Jen Abasola

Goal	Data collected	Progress	
State your goal for the Week	State/list the data collected relevant to your project	State the progress you have made so far by the end of the week	
This week, we plan to focus on developing two code blocks: one for the Savings menu and one for the flow of the menu itself, displaying multiple features. The aim is to implement these blocks so they can function independently, demonstrating the potential of our Python program.	We referred to pre-existing financial apps as references for the menu flow and features. We did not copy any code; instead, we used these apps as inspiration to design a menu structure and functionalities that align with our project goals.	We have successfully designed the code block flow and begun implementing the savings menu code block. The flow is clear, organized, and easy to follow, and the pre-code already demonstrates the full potential of our Python program.	
STRENGTH:	AREAS FOR DEVELOPMENT	STRATEGY FOR SUCCESS	
The code flow has been smooth and efficient so far, allowing us to implement features quickly. Having a pre-code structure in place gives a strong foundation for building the full program.	We aim to improve our code by debugging errors in the savings menu code block to ensure all features work correctly and the block functions independently.	Next week, we plan to complete the two code blocks so they can operate independently without the full program. We will continue testing, debugging, and refining the code to ensure it is fully functional and reliable.
